Smart Tag

RFID Sticker for Improved Traceability

Smart Tags are typically affixed to pipettes or beakers to track the sample more easily.

Choosing an area to fix the Smart Tag

The area must be:

- flat (if only round areas are available, choose a place with a large radius)
- far from metal
- away from the gripping area
- easy to hold next to the RFID reader

Fixing the Smart Tag to the container

1 Clean the area with a mild solvent, e.g., isopropanol or methanol.
2 Wait until the area is completely dry.
3 Fix the Smart Tag to the area.
